MEDICAL LIBRARY ASSOCIATION, INC.  
AND THE  
FRIENDS OF THE ARMY MEDICAL LIBRARY  
Washington, D. C.

MICROFILM COPYING POLICY  
OF THE PHOTODUPLICATION SERVICE  
OF THE ARMY MEDICAL LIBRARY

In order to permit the collections of this Library to be used on the widest possible scale, microfilm copying is being done without charge and and as liberally as the resources of the Library permit in performing this service. It is considered that no one engaged in medical research or in reviewing the medical literature will ask for microfilms of material which they do not expect to be able to use for clarifying or solving the problems upon which they are engaged. Each person is deemed to be the judge of what he can use to best advantage and the requests made for microfilms are never questioned.

The only reservation is that texts and books which are available by purchase are not copied. Microfilm copying is confined to the source literature of medicine published as individual communications in periodicals and serials. Furthermore, requests for entire issues of these will not be granted except in special cases, justified by particular conditions.

It has been suggested that commercial firms which profit by the sale of the products they develop through research, should not be given the same consideration accorded those who do not profit financially from their work. Such a discrimination does not appear to be justified since the discoveries made by the commercial firms are usually equally as advantageous to the general welfare as those made in universities and publicly supported institutions. Furthermore, the intensity with which problems are studied, is often far greater in the highly organized manufacturing firms than in endowed or government institutions, and the contributions they make to medicine are frequently of more immediate application. It is only by the united efforts of everyone that most rapid progress can be made, and for this reason it is considered that microfilm copying service should be conducted by libraries for the benefit of everyone without distinction.

(Continued on inside back cover)

---

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is \$5.00 per year in the United States and \$5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at \$1.00 per year. Address communications to:  
Medicofilm Service  
Army Medical Library,  
Washington, D.C.

# I. Anatomy; Histology

Anat. Rec., 1944, 88: (Feb.)

- GIULIN, N., & ALLEY, A. Studies in skull growth; coronal suture fixation. 143-53.
- VANN, H. W., & MILLER, R. E. A case of pseudo-monoventricular heart terminating in brain abscesses. 155-60.
- DEANE, H. T. A cytological study of storage and secretion in the developing liver of the mouse. 161-73, incl. 2 pl.
- SIVER, P. H. The drainage of particulate matter from the peritoneal cavity by lymphatics. 175-92.
- WISBATT, W. A. Further studies on the survival of spermatozoa in the female reproductive tract of the bat. 193-204.
- TEISS, F. In vitro transformation of spindle cells of neural origin into macrophages. 205-21.

# 4. Aviation Medicine

Luftfahrtmedizin, 1942-43, 7:  
(Sept. 25)

- LOESCHKE, H. H. Die Grenzen der Kreislaufumstellung im akuten O<sub>2</sub>-Mangelversuch. 1-8.
- HORNBERGER, T., & BENZINGER, T. Druckfallkrankheit. 9-34.
- KILCHES, R. Atmosphärischer Drucksturz und Tarnblüterorganismus. 35-45.
- FEULGEN, R. Kompensierte Anaglyphen zu dem Raumschiffprüfgerät nach Koch. 46.
- WERZ, R. VON, & REITER, R. Die Reduktionszeit als Indikator für die Sauerstoffversorgung des Gewebes. 47-67.
- SCHWELB, J. Ueber das Verhalten des Muskelblinnendruckes (Muskeltonus) bei akutem Sauerstoffmangel. 68-83.
- LUTZ, W. Die Ueberlebenszeit nach Drucksturz in größten Höhen. 84-97.
- WELTZ, G. A., & TERZ, R. VON. Die Darmbewegungen unter Sauerstoffmangel. 98-117.

Luftfahrtmedizin, 1941-42, 6:  
(July 30, 1942)

- BOCHNER, F. Strukturveränderungen durch allgemeinen Sauerstoffmangel, insbesondere bei der Höhenkrankheit. 281-95.
- GOLWITZER-MAYER, K. Ueber die Azidose des Herzmuskels unter Sauerstoffmangel. 296-302.
- KRAMER, K. Grundlinien zur Erforschung der Herzenergetik. 303-13.

# 5. Bacteriology; Parasitology

Bact. Rev., Balt., 1943, 7: (Dec.)

- HENRY, H. J. The mode of action of sulfonamides. 175-262.

J. Bact., Balt., 1944, 47: (Feb.)

- MURRAY, H. C. Aerobic decomposition of cellulose by thermophilic bacteria. 117-22.
- MORTON, H. E., & SOMMER, H. E. The variation of group C hemolytic streptococci. 123-8.
- STOKINGER, H. E., ACKERMAN, H., & CARPENTER, C. M. Studies on the gonococcus; constituents of the cell. 129-39.
- Studies on the gonococcus; properties of an antigenic fraction isolated from cell-free gonococcal broth supernatants. 141-7.

- STOKINGER, H. E., CARPENTER, C. M., & PLACK, J. Studies on the gonococcus; quantitative agglutinative reactions of the Neisseria with special reference to Neisseria gonorrhoeae. 149-57.
- ROGOSA, M. Vitamin requirements of lactose-fermenting and certain other yeasts. 159-70.
- CHRISTENSEN, W. D., & GOWEN, Z. H. An arabinose-fermenting bacterium of the lactose-negative, mannitol-negative Shigella group. 171-6.
- HOFFMANN, C. E., & RAHN, O. The bactericidal and bacteriostatic action of crystal violet. 177-86.

Another question which has been raised is whether microfilms should be made for those to whom the original journals are known to be available. In such cases, it is assumed that advantage is being taken of the particular attribute of microfilm by which the widely scattered papers on a given subject can be brought together for study at the time and in the manner found most convenient. Certainly a collection of microfilms will often represent a far larger number of volumes than could possibly be brought together at one time and in one place. It is, therefore, assumed that even if a person has access to certain parts of the published source literature, he may still be able to use microfilms of this part of it to great advantage.

The advancement of medicine and of science in general is a common endeavor, and contributions wherever made, benefit equally our own and all other people. It is, therefore, held that the aid rendered by microfilms should be extended not only to those in our own country, but to all others engaged in medical research wherever they may be.

One of the principal merits of microfilms is that they relieve the research worker of the need of going to the library and thus lighten the task involved in securing and using the source literature. The effort thus spared certainly increases the amount which remains for consecration to the solution of research problems. To this extent, at least, microfilms contribute to the more rapid progress of research and deserve to be supplied by libraries on the widest possible scale to all who are able to use them for the advancement of science.

Although this Library intends to serve as large a number of persons as possible, it will certainly not be able to satisfy all the needs for microfilms which will undoubtedly arise. For this purpose, the collaboration of other libraries will undoubtedly be necessary and it is hoped that many others will adopt this means of extending the service they render to the advancement of learning.
